

■ WoahAI Chatbot — Code of Conduct

1. Purpose

The WoahAI Chatbot project is an open learning initiative built to demonstrate practical AI integration using OpenAI APIs. It's meant to educate developers, showcase responsible AI practices, and encourage collaboration — not commercial exploitation. This Code of Conduct defines how contributors and learners engage with the project to maintain a respectful, safe, and ethical environment.

2. Our Principles

WoahAI stands on three pillars: Integrity, Learning, and Responsibility. We encourage curiosity with respect, transparency, ethical AI use, collaboration over competition, and attribution. We do not tolerate harassment, plagiarism, abusive API use, or violation of OpenAI's usage policies.

3. Community Conduct

Keep discussions kind, relevant, and constructive. Treat code reviews as collaboration, not criticism. Report bugs instead of exploiting them. Ask before pushing code if unsure about AI data handling.

4. Maintainer Responsibilities

Project maintainers ensure contributions align with ethical AI use, review pull requests fairly, and remove content that violates OpenAI or community policies.

5. Reporting and Enforcement

To report a violation, contact conduct@woahai.dev. Violations may result in a warning, temporary restriction, or permanent ban. All reports are handled confidentially and respectfully.

6. Educational Focus

WoahAI exists for learning, not profit. Contributors are encouraged to experiment responsibly, respect API limits, and credit OpenAI and other sources appropriately.

7. Attribution

Adapted from the Contributor Covenant, with emphasis on ethical AI education, open collaboration, and responsible API usage.
